LNOB team checking in!

It's time to start using those results. We've taken you through the methodology, now we'd like to share updates to the platform, ways you can use the LNOB results, and what's coming up next.

LNOB results used in VNRs

Your work and the LNOB Platform

What's Next

New Indicator added!

Recently we added a new indicator to the LNOB platform. The indicator is Not in Education, Employment or Training (NEET). After discussion with our counterparts in Turkmenistan, we realized this data was available in the MICS 2019 report for Turkmenistan and were able to run and refine the analysis. Are there any additional indicators that you would like to explore? *Reply directly to this email and let us know!*

Using Results in Voluntary National Reviews (VNRs)

Our LNOB results can be downloaded straight from the platform and incorporated into VNRs. Take a look at our contribution to the Papa New Guinea VNR 2020.

What is your area of work?

We'd like to hear from you...

What is your area of expertise? How can we combine our knowledge to reach the furthest behind. Let us know which results stand out or which resonate with your findings.

What's next?

We have completed introductory trainings with Mongolia, Philippines, SPC and Tonga. Next on our agenda is trainings with Turkmenistan and India, and also developing the technical training to reproduce the LNOB Methodology in R. Many people have asked us if the methodology can be applied to different data sets. As we create our training, we would like to cater it to your specific country's requirements. Is there a data set that you currently work with that could work with the LNOB methodology?

Email us and so we can discuss the possibilities.
